

Roadside Relics ***Hands on Quality***

Roadside Relics began with a vision to recreate the world's most recognized and sought after icons from the first half of the 20th century. In time, our line has expanded to include neon tire clocks, classic gas pumps and vintage soda coolers.

Product development begins with extensive historical research, then searching through antique stores and auctions to find the right original piece. From that our design team painstakingly works over the details to create accurate models which will ensure authenticity of every Roadside Relics item.

Once tooling is completed and accessories have been sourced, we're ready to make fiberglass parts. First, a hi-gloss gel coat is sprayed into the mold, backed with fiberglass cloth and resin. These materials bond to form a replicated part.

Prior to assembly, each part goes through a thorough inspection for any finish imperfections. Next, each part is hand polished and buffed. Only then will parts be delivered to our assembly department.

In our assembly department, skilled craftsmen professionally assemble each product. Items are available in a rainbow of colors and themes, so they rely on instructions from you, the customer, to build a truly unique piece.

Before final packaging, each item is reviewed and inspected to ensure the highest standard of quality and your satisfaction.

Only then will we securely package items for shipment to your home, office, or business.

Today, Roadside Relics is one of the world's leading manufacturers of replica memorabilia. Our success is a result of superior quality and first rate customer service. Enjoy our catalog and visit us online at www.roadsiderelicsonline.com!
